

SWITCHING DEVICE, SWITCHING METHOD AND
COMPUTER SYSTEM CAPABLE OF PREVENTING ERROR
IN DATA TRANSMISSION, WHICH IS EASY TO USE

5

ABSTRACT OF THE DISCLOSURE

10 A switching device for controlling a connection
between a private computer, a shared computer, and a
terminal includes: connecting unit that connects each
terminal to a corresponding private computer in a default
status, and switches a connection destination of the
15 terminal to a private computer corresponding to the
terminal or the shared computer when a connection
switching request transmitted from the terminal has been
received; and security unit that executes for each
terminal identification processing on the data that has
20 been received from any one terminal and output to the
private computer or the shared computer.
